

Unsere wichtigsten Forschungsleistungen im Jahr 2023. Es gelang uns in vielen Teilbereichen wichtige Forschungsarbeiten abzuschließen und neue zu initiieren:

Implantologie: In einer multizentrischen Studie haben wir verschiedene Implantat-Oberflächen-Dekontaminationsmethoden auf ihre Effizienz und Zytokompatibilität hin untersucht (Stein et al. 2023). Dafür gab es den **1. Preis für Grundlagenforschung** bei der Jahrestagung der DGParo 2023.

Parodontologie/Laserzahnheilkunde: In einer aufwändigen klinisch-mikrobiologischen Studie haben wir Laser-basierte (Er,Cr:YSGG) Dekontaminationsverfahren für Titanimplantat-Oberflächen untersucht (Kottmann et al. 2023). Wir konnten zudem zeigen, dass der initiale Einsatz eines neuartigen Diodenlasers mit blauem Licht (445 nm) bei der Parodontalbehandlung hilft Bakteriämien (Eintrag von Bakterien ins Blutgefäßsystem) zu vermeiden (Jansen et al. 2023). Wir haben in 2023 drei Studien zur differentiellen Virulenz des Schlüssel-Pathogens (*Porphyromonas gingivalis*) der Parodontitis publiziert (IZKF-gefördert): Klomp et al. 2023, Schön et al. 2023, Meyer et al. 2023.

Systemische Erkrankungen reflektieren sich in der Mundhöhle: Als Spezialisten der oralen Mikrobiologie und Immunologie sind unsere Methoden im Stande die Fernwirkungen von entzündlichen Darmerkrankungen in der menschlichen Mundhöhle zu erkennen. So verändert sich der Anteil von *Veillonella* spp., *Prevotella* spp., und *Prevotella salivae* bei entzündlichen Darmerkrankungen (IBD) im Speichel (Hammad et al. 2023), was man diagnostisch nutzen könnte..

Kongress-Beiträge/Sonstiges: *Porphyromonas gingivalis* ist der bedeutendste Pathobiont bei der Parodontitis. In Aachen legen wir zu diesem Erreger innerhalb eines IZKF- (Interdisziplinäres Zentrum für klinische Forschung) geförderten Projekts die weltweit größte Stamm- und Genomdaten- Sammlung an. In einem Vortrag bei der 55. Jahrestagung des Arbeitskreises für Grundlagenforschung haben wir über die Ergebnisse berichtet. (12.-13.01.2023). Auf der ECCMID (European Congress of Clinical Microbiology and Infectious Diseases) hatten wir zwei Präsentationen (15.-18.04.2023, Abdelbary et al.) über den Themenbereich Mikrobiom und systemische Erkrankungen. An der FH Jülich durften wir über Orale Erkrankungen und den Einsatz von Nanotechnologie berichten (24.04.2023, Jülich). Bei einer Fortbildung der Deutschen Pharmazeutischen Gesellschaft haben wir Einblicke in das Orale Mikrobiom gegeben (13.06.2023). In Tromsø an der arktischen Universität haben wir auf Einladung norwegische Zahnmedizinstudierende in den Themen Mikrobiom/Genomik und Orales Ökosystem weitergebildet (Conrads, 18.10.2023). Der Masterstudiengang "M.Sc. Periodontology" an der RWTH International Academy (<https://master-periodontology.com/de/>) ging im WS2023-24 mit 14 Teilnehmern aus 11 Ländern in die dritte Runde (Braun [Leitung], Conrads, Deschner u.v.a.).

Unsere Abteilung hat zum dritten Mal (13th. Edition) zum Standard-Lehrbuch *Manual of Clinical Microbiology* ein Kapitel (57) über Gram-negative Anaerobier (z.B. Bacteroides, Fusobakterien, Prevotellen und Porphyromonaden) beigetragen.
